Tower Installation and Inspection

MCN can handle all your tower needs as quickly as possible. These services include: installation, maintenance, painting, servicing and inspections, both aerial and by hand. MCN is able to build and work on towers to a maximum height of 1500 feet at this time, but higher is available with some notice. MCN is a modern technological company, being the first in the world to use Draganflyer Stabilized Aerial Video System Helicopter to help speed up the process of tower inspections.

MCN is proud to offer a new piece of equipment to its valued customers, which greatly speeds up the inspection process of their towers, and will in turn reduce the cost, to the clients, for having the towers inspected on regular bases. The cost of using the Dragonflyer is approximately a 50 percent savings, and also provides a video of the tower inspection to keep on record. This allows you to see potential problem areas for future inspections to focus on, allowing you to know where the corrosion and problem areas may be forming and catch them at a faster rate.

All Images are stored on a DVD, and given to the client so that they can keep a record of all inspections done on the tower. These inspection videos allow them to get up close and personal to see every inch of their tower in stills and in video.

MCN is a full service network and telecommunications company that is capable of handling all of your corporate telecommunication needs. When an emergency arises our response crews are ready to roll out on the shortest call out time in the industry twenty four hours a day seven days a week three hundred and sixty five days of the year. Based out of Saskatoon, Saskatchewan MCN is there to provide the best service in all locations across Western Canada.
